

# **GUÍA DE INICIO RÁPIDO**

### FILTROS - AVANZADO

Aprende a:

- 1. Utilizar filtros y su funcionalidad
- Cómo crear un filtro en las pestañas Muestras, Equipos y Etiquetas
- 3. Eliminar filtros

### EXPLICACIÓN DEL FILTRO

Los filtros son un conjunto de criterios de búsqueda específicos guardados, denominados "propiedades", que permiten a los usuarios limitar la información que se muestra en las distintas pestañas del portal Labcheck. En función de las condiciones de filtrado que se apliquen, los datos se mostrarán en consecuencia.

Los filtros están diseñados para ahorrar tiempo a la hora de buscar informes de muestra y equipos o de crear etiquetas o informes de gestión.

Los filtros son aplicables a las pestañas MUESTRAS, EQUIPOS, ETIQUETAS, INFORMES y DISTRIBUCIÓN.

### **PROPIEDADES DEL FILTRO**

Las Propiedades del filtro son los campos de datos en los que usted elige aplicar su filtro. Dependiendo de la pestaña en la que se encuentre, se aplicarán las propiedades de filtro correspondientes.

La siguiente tabla explica qué propiedades son aplicables en cada pestaña.

MUESTRAS	EQUIPO	ETIQUETAS	INFORMES
Nombre del cliente Lugar de trabajo del cliente Ciudad / Estado / Código postal Unidad ID Unidad Lugar de trabajo Marca de la unidad Modelo de unidad Tipo de componente Componente Marca Modelo de componentes Componentes Componente Número de referencia Condición de la muestra	Lugar de trabajo del cliente Unidad ID Fabricante de la unidad Modelo de unidad Componente	Componente Unidad ID Lugar de trabajo del cliente Número de seguimiento Estado	Lugar de trabajo del cliente Intervalo de fechas
Fabricante de aceite Marca de aceite Grado de aceite			

### **OPERADORES DE FILTRADO**

Es igual a	Sólo mostrará los resultados que <u>coincidan con</u> el valor <u>exacto</u> introducido para la propiedad dada
No es igual	Sólo mostrará los resultados que <u>no coincidan</u> <u>con el valor exacto</u> introducido para la propiedad dada
Empieza por	Sólo mostrará los resultados que <u>empiecen p</u> or el valor introducido para la propiedad dada
Contiene	Sólo mostrará los resultados que <u>contengan el</u> valor introducido para la propiedad dada

#### **VALORES DE FILTRADO**

El campo Valor debe rellenarse en función de la Propiedad y el Operador seleccionados. Por ejemplo, si está buscando informes, pero sólo quiere ver informes de motores, seleccionaría 'Componente' como propiedad. En el campo Operador, seleccionaría 'Iguales' porque conoce el componente exacto que está buscando. Por último, en el campo de valor, introduciría "Motor". En este ejemplo, se mostrarían todos los motores.
